US Citizen in Virginia

Education & Certificates

- B.S. in Computer Science from Western Governors University Graduated 2026
- Linux Professional Institute Linux Essentials Professional
- ITIL 4 Foundation Certificate in IT Service Management
- Google Data Analytics Professional

Projects

AI Talent Agent

- Created an LLM-powered talent agent integrated with Gmail, Outlook, and custom email infrastructure to ingest inbound brand deals, extract structured deal data, and generate negotiated responses using Anthropic Claude API across a multi-stage evaluation pipeline.
- Engineered hybrid decision logic combining deterministic rule constraints and LLM-based evaluation to enforce creator-defined deal boundaries such as minimum compensation, brand exclusions, and content requirements, with automatic rejection when constraints fail.
- Designed Stripe-based invoicing flow for automated agent system, supporting ACH, wire, debit, and card payments, with manual fallback via admin dashboard for edge cases.
- Built real-time email processing pipeline using OAuth, Google Pub/Sub, and Microsoft Graph API to monitor and respond to inbound messages.

Ephemera Web Platform

- Launched a full-stack creator platform as the sole developer, delivering an AI-powered inbox, landing page, and admin dashboard.
- Built frontend in TypeScript and React with Vite and Tailwind CSS; implemented data fetching and state management with TanStack Query and tRPC.
- Architected a PostgreSQL data layer on Supabase using Kysely migrations, designing and managing schema for users, deals, emails, purchases, and platform events.
- Implemented authentication, row-level security, rate limiting, and server-side validation to enforce data integrity and user isolation.

AI Fraud Detection System

- Trained a credit card fraud detection system in Python using scikit-learn and XGBoost trained on 284,807 transactions, achieving 88% accuracy on a dataset with <1% fraud rate.
- Implemented full ML pipeline including preprocessing with pandas, feature scaling, and SMOTE-based synthetic data generation to handle extreme class imbalance.
- Applied 5-fold cross-validation and randomized hyperparameter tuning to optimize model performance and verify the system generalized well to unseen data.
- Deployed predictions through a Streamlit interface for real-time fraud classification with confidence scoring.

Open Source Contributions

- [Evanflow](#) - Open-sourced a TDD-driven iterative agent workflow system for Claude Code with 16 custom skills and an orchestration layer that enforces continuous feedback loops, guiding features through repeated cycles of ideation, implementation, testing, self-review, and structured failure analysis. 350+ GitHub stars.
- [Omarchy Theme](#) - Created a desktop theme for the popular Arch-based Linux distribution, designing cohesive colors, wallpapers, and UI elements across terminal, window manager, status bar, and apps; officially included in the software's Extra Themes section in the manual.

Work History

Founding Product Lead at Ephemera, Remote

January 2026 - May 2026

- Sole implementer at an early-stage startup, architecting and shipping a full-stack agentic platform from frontend to backend while working aggressive hours to meet investor-driven timelines.
- Regularly delivered new features on compressed timelines, spinning up complete functionality over weekends to have working demos ready for Monday investor meetings.
- Interfaced directly with beta talent using the product to gather feedback and guide product direction alongside co-founder and investor input.

AI QA Tester at Uber AI Solutions, Remote (Contract)

June 2025 - January 2026

- Evaluated large language model outputs for accuracy in coding and software development, providing Reinforcement Learning from Human Feedback (RLHF) to optimize model reasoning.
- Applied domain expertise in Java and software development to evaluate model outputs, identifying logical errors, edge cases, and flawed implementations.
- Operated autonomously in a fully remote capacity, managing annotation workflows and balancing responsibilities alongside full-time undergraduate studies.

Freelance Video Editor, Remote

August 2024 - January 2025

- Managed end-to-end post-production for a web series, collaborated with stakeholders, accepted and implemented feedback to deliver polished episodes on deadline.
- Coordinated with post-production teams to integrate project updates and deliver on schedule.
- Tracked revision history across multiple draft cycles, ensuring each round of stakeholder feedback was fully addressed before advancing to the next stage of post-production.
