US Citizen in Virginia • Open to relocation

Education & Certificates

- B.S. in Computer Science from Western Governors University Graduated 2026
- Linux Professional Institute Linux Essentials Professional
- ITIL 4 Foundation Certificate in IT Service Management

Projects

Ephemera AI Talent Agent

- Created an autonomous deal-processing system that ingests inbound brand offers, extracts contract terms, evaluates creator-defined constraints, and generates responses, processing hundreds of commercial emails end-to-end.
- Shipped Stripe-based invoicing system for agents, supporting ACH, wire, debit, and card payments, enabling closed-loop deal execution from email intake to payout.
- Combined deterministic rules with LLM-based evaluation to enforce creator-defined deal constraints such as minimum compensation and content requirements, with automatic rejection when requirements were not met.
- Built real-time email processing pipeline using OAuth, Google Pub/Sub, and Microsoft Graph API to monitor and respond to inbound messages.

Ephemera Web Platform

- Launched a full-stack creator platform as the sole developer, delivering an AI-powered inbox, landing page, and admin dashboard used by dozens of celebrities.
- Built frontend in TypeScript and React with Vite and Tailwind CSS; implemented data fetching and state management with TanStack Query and tRPC.
- Architected a PostgreSQL data layer on Supabase using Kysely migrations, designing and managing schema for users, deals, emails, purchases, and platform events.
- Implemented authentication, row-level security, rate limiting, and server-side validation to enforce data integrity and user isolation.

Polypore IDE

- Released an open-source desktop IDE (Tauri, React, Rust) purpose-built for agent-driven software engineering, in active use by a growing base of developers.
- Designed an original long-term memory and context-engineering system that gives agents persistent, structured knowledge across sessions.
- Developed an agent-agnostic secrets broker that strips credentials from agent environments and mediates outbound requests, so secrets are never exposed to the model.
- Embedded an MCP server exposing skills, memory, secrets, and editor state as tools, letting agents operate the IDE directly rather than through shell guesswork.

[Evanflow \(400+ GitHub stars\)](#)

- Open-sourced a TDD focused iterative agent workflow system for Claude Code, implementing 16 custom skills and an orchestration layer enforcing continuous feedback loops across ideation, implementation, testing, and self-review.
- Grew the project to 400+ GitHub stars through community adoption and developer engagement.
- Established evidence-driven workflows that improved the reliability and testing discipline of AI-assisted software development.

Work History

Founding Product Lead at Ephemera, Remote

January 2026 - May 2026

- Served as employee number 1 and sole implementer at an early-stage AI-native creator platform used by celebrity talent, delivering end-to-end product including inbox automation, deal management, and admin tooling.
- Delivered new features on compressed timelines, spinning up complete functionality over weekends to have working demos ready for Monday investor meetings.
- Interfaced directly with beta talent to gather feedback and guide product direction alongside co-founder and investor input.

AI QA Tester at Uber AI Solutions, Remote (Contract)

June 2025 - January 2026

- Evaluated large language model outputs for accuracy in coding and software development, providing Reinforcement Learning from Human Feedback (RLHF) to optimize model reasoning.
- Applied domain expertise in Java and software development to evaluate model outputs, identifying logical errors, edge cases, and flawed implementations.
- Operated autonomously in a fully remote capacity, managing annotation workflows and balancing responsibilities alongside full-time undergraduate studies.

Freelance Video Editor, Remote

August 2024 - January 2025

- Managed end-to-end post-production for a web series, collaborated with stakeholders, accepted and implemented feedback to deliver polished episodes on deadline.
- Tracked revision history across multiple draft cycles, ensuring each round of stakeholder feedback was fully addressed before advancing to the next stage of post-production.
